Application Development

VoIP Integration TAPS (Tool for Automated Provisioning System) allows for the quick and easily assignment of device configurations to un-provisioned Cisco IP Phones.

TAPS can be up and running in minutes and integrates directly with Cisco Unified Communications Manager.

Utilizing the LCD screen on an un-provisioned phone , TAPS will prompt for the correct extension. If only one device has that extension the phone will reboot with the selected profile. Where an extension exists on multiple phones (shared-lines / different partitions) the screen will show a menu of available phones including the description.

TAPS can also automatically collect Serial Numbers as the phones are deployed and if configured, can prompt for additional custom information such as network port id, cubicle/room number, asset tag, etc. Reports of phones provisioned using TAPS are easily exported for inclusion in project documentation.

TAPS removes the requirement to scan MAC addresses, label boxes and ensure the correct box makes its way to the right location or install and configure an separate Cisco TAPS IVR server.

Phone placement becomes quick and easy, just unpack the correct model phone and then just enter an extension.

Supported Phone Models :

6921, 6941, 6945, 6961, 7821, 7841, 7861, 7905, 7906, 7911, 7912, 7920, 7921, 7925, 7925-EX, 7931, 7936, 7937, 7940, 7941, 7941-GE, 7942, 7945, 7960, 7961, 7961-GE, 7962, 7965, 7970, 7971-GE, 7975, 8831, 8841, 8851, 8861, 8941, 8945, 8961, 9951, 9971, IP Communicator

Requirements :

- Call Manager 5.x to Call Manager 8.x
- Windows PC with Microsoft .Net 3.5+

TAPS Feature Comparison:

	Cisco	VoIP Int.
Time to TAPS Phone:	20 Sec	2 Sec
Concurrent Users:	4	Unlimited
Setup Time:	2-4 Hr	5 Min
Shared Line Support:		
Collect Custom Info:		
Collect Serial Numbers:		
Generates Reports:
